regional raw  
materials*

# Climate protection for road construction – it can be so simple!

Due to climate change, extreme weather events are increasing rapidly. Long periods of heat and heavy rainfall make an enjoyable urban life more difficult.

With Stabilizer road surfaces, we offer a natural air conditioning system to reduce heat islands, especially in urban areas.

In order to reduce the sealing of surfaces Stabilizer2000 GmbH offers natural system solutions and guides surface water into the underground. Water permeability in the system structure combined with the high water storage capacity is the solution for pavements and, at the same time, microclimate improvements.

With Stabilizer products, you have a wide range of planning options for making sensible use of natural and regional raw materials (at least 99%) and, by unsealing the surfaces, for better storage and circulation of water and air.

Let's get  
this town  
breathing ...

Basel Falkensteinerplatz with →  
Stabilizer SWG red 0-8 mm

... and use the  
variety of design  
possibilities.  
Let's create new  
recreational  
areas.

← Recreation islands instead of heat islands: Schüssinsel in Biel with Stabilizer Jura 0-5 mm

←← Tetuán in Barcelona with Stabilizer lime 0-5 mm

For young  
and old ...

parcs in Munich with →  
Stabilizer Isagrey 0-8 mm

... as well as  
the princely  
lifestyle's in  
Salzburg for  
higher loads.

← Residenzplatz in Salzburg – Stabilizer  
special mixture light grey 0-11 mm

Take advantage of the benefits of the sustainable Stabilizer products and let us look into a greener future.

With a variety of design possibilities as well as conditions of use by adapting the properties of our road surfaces, we can respond to your individual needs.

For the perfect realization of your project, we recommend contacting Stabilizer2000 GmbH or directly your regional sales partner.

We will be happy to advise and support you with our experience.
